SUMMARY

Computer Science student focused on software engineering, full-stack web, and mobile development. Experienced building applications with React, Next.js, NestJS, Express.js, and Flutter, including REST APIs, real-time features, and AI integration. Seeking a software engineering internship.

EDUCATION

Bina Nusantara University, Alam Sutera, Tangerang — August 2024 – Expected 2028
Bachelor of Computer Science

TECHNICAL SKILLS

Programming	Dart, TypeScript, JavaScript, C#, PHP, SQL, HTML, CSS
Frameworks & Libraries	React, Next.js, NestJS, Express.js, ASP.NET Core, Flutter, Laravel, Tailwind CSS
Database / Backend	PostgreSQL, MySQL, SQLite, Prisma, TypeORM, REST API, WebSocket (Socket.IO), JWT Authentication
Tools & Others	Git, GitHub, Docker, Swagger, Jest, Firebase, Figma, Gemini API

EXPERIENCE

Freelance Web Developer — 2025
Prima Jaya Teknik — *primajayateknik.com*

- Built a company website and product catalog with 130+ product pages and product search for an industrial gasket and gland packing distributor.
- Developed the back-end with ASP.NET Core (.NET 10), C#, and SQLite, storing contact form messages, forwarding them by email over SMTP, and tracking contact clicks and page views as sales leads.
- Added rate limiting to the contact and lead endpoints to prevent spam, and maintained the site in production.

E-commerce Store Operator — 2025 – Present

- Operate an online store selling high-value industrial products, managing 130+ product listings with technical specifications, photos, and pricing.
- Handle buyer inquiries and quotation requests, answering technical questions on material, size, and operating ratings to help B2B customers choose the right product.
- Manage orders end to end, from payment confirmation and stock checks to packing, shipping, and after-sales support.

PROJECTS

LetsMeet – AI-Powered Event Sponsorship Platform — github.com/jeremzhg/LetsMeet
React, TypeScript, Express.js, PostgreSQL, Prisma, Docker, Gemini API

- Developed in a team of 5 a platform connecting event organizers with corporate sponsors, using the Gemini API with structured JSON output to generate compatibility scores and short reasoning for each event-corporation pair.
- Built the responsive frontend with React 19, React Router, and Tailwind CSS, including event management, partnership tracking, and an event forum.

PlayHub – Multiplayer Game Session Platform — github.com/Jesssssswill/PlayHub-SoftwareArchitecture
NestJS, Next.js, TypeScript, Socket.IO, TypeORM, Tailwind CSS

- Built a real-time multiplayer platform supporting Tic-Tac-Toe, Connect Four, and Chess, with a REST API for session management and Socket.IO for live game updates.

· Structured the NestJS backend into presentation, business, persistence, and infrastructure layers, applying design patterns such as Factory, State, Builder, Facade, Proxy, and Adapter.

MediaVault – Cross-Platform Media Tracking & Discovery App github.com/Agerbav/mediaVault
Flutter, Riverpod, Express.js, Prisma, MySQL

· Built a Flutter mobile app for tracking movies, TV shows, games, music, and books in a personal library, with progress tracking, reviews, and completion stats.
· Integrated four external APIs (TMDB, RAWG, MusicBrainz, Open Library) with a database caching layer to power search, trending, discovery, and preference-based recommendations.
